

Concentra NEON

FOCUSNEO

Neon can be both finely chic or rocky and loud. It's the painted front and the neon tubes on top that make up the logotype.

CHARACTERISTICS

- » Intense light
- » Suitable for logos without great contrast effect
- » In the dark, logo appears in contour or as a whole.

MANUFACTURING

Front and sides of the letter are made of aluminum coated in any color. To give the letter a durable surface, they are painted with a water-based car paint. The front can be provided with an edge that shields the light and sharpen the letter contour if desired. On the letter front, the neon tubes are mounted, either centered or in contour.

MOUNTING

Lettering can be done either with a pin spaced from the facade or on a frame painted in the facade color. Cables are installed in a cable list or in the frame. Transformers are conveniently placed indoors, or in IP-rated boxes on the facade that are painted as the color of the facade.

GENERAL INFORMATION ABOUT NEON

- » The color selection is limited to a number of neon tubes in different shades.
- » Minimum depth approx. 150 mm
- » Sensitive to touch
- » Powerful light - the entire letter is a light source or the letter's contour
- » Long life approx. 20,000 hours
- » Contains 0.02 mg of mercury, when scrapped, the mercury is returned for recycling to authorized environmental manager
